A GREEN GIFT IDEA

Jardinier's Reservoir System conserves water and reduces maintenance costs

FOUNTAIN VALLEY, Calif. – Jardinier Corporation offers an outstanding gift idea for the green-minded gardener who wants lush flowers with the luxury of skipping a few waterings.

The company's patented Reservoir System converts any planter or pot to a capillary self-watering irrigation system that reduces water consumption, eliminates problems of overspray, evaporation and runoff, and produces lush foliage with a low-maintenance watering schedule of every three to eight weeks.

The system works on the same principle as a sponge in a quarter glass of water. The sponge absorbs water by capillary action and will stay evenly moist, even on top. Utilizing the reservoir with Jardinier's specialized blended potting soil will produce the same results as the sponge, keeping your plants properly watered for weeks on their own.

The reservoirs come in a variety of shapes and sizes and can be configured to any planter design – from standard decorative pots to custom design-build installations.

The reservoir tanks are easy to install, easy to maintain, eliminate water runoff, and have the added benefit of acting as a water-collection system during the rainy season. Indoors, they assist in purifying the environment.

Reservoirs and ecosoil can be ordered simply by calling 714-420-4200 or at sales@jardiniercorp.com. For information, visit www.jardiniercorp.com. Jardinier Corporation is located at 16520 Harbor Blvd., Fountain Valley, CA 92708.
