## GAI Irrigation Reservoirs Are Easy To Install And Easy To Maintain

**STEP ONE:** Place approximately 2" - 3" of gravel at the bottom of your decorative planter to prevent soil from entering gravel area. Place filter cloth over gravel if desired but not necessary.

**STEP TWO:** Place soil over gravel then place GAI reservoir onto the soil base.

**STEP THREE:** Insert 1-1/4" Fill Tube into GAI reservoir fill unit, trim to a height of 1/2" to 1" above top of decorative planter.

**STEP FOUR:** Place formulated Eco Soil™ into planter to desired level - tamp down, do not pack.

**STEP FIVE:** Place plants into planter and add Eco Soil™ around plants.

**STEP SIX:** Water soil thoroughly and add water into fill tube until GAI reservoir tank is full.

**STEP SEVEN:** Use GAI dipstick to determine when tank is full. Replenish water in tank as required to moisture level.
